

Full Stack Development V8

Module 2

Module-End Assignment:

**“Responsive Signup and Signin Page with JavaScript
Validations”**

Assignment Task Overview

Create responsive Signup and SignIn pages using HTML, CSS, or Bootstrap with JavaScript-based form validation. This Webpage must include

- **The Signup page** should include fields for Full Name, Email, Phone Number, Location/City, Password, and Confirm Password. All fields should be mandatory to ensure complete user information.
- The Email must follow a valid format (e.g., *example@mail.com*), the Phone Number should have 10 digits, and the Location/City must contain only alphabets.
- The Password should be at least 8 characters long with a mix of letters and numbers, and the Confirm Password must match the entered password.
- **The SignIn page** should include Email and Password fields, with validation to check required inputs and proper email format.
- Provide a redirect link between Signup and SignIn pages for smooth navigation.
- Style the pages using CSS3 or Bootstrap, implementing Flexbox/Grid and media queries for responsiveness across **mobile ($\leq 768\text{px}$), tablet (769–1024px), and desktop ($>1024\text{px}$)**. Maintain a consistent theme using relative font units, colors, and spacing.
- To enhance the design, include a **show/hide password toggle** feature that allows users to view or hide their password while typing, improving usability and reducing input errors.
- Additionally, implement inline error messages or color indicators to provide instant feedback during form validation, helping users easily identify and correct mistakes in real time.
- Only users with a **registered email address** can sign in to the page. When the entered **SignIn details** match the information provided during the **Signup process**, the user will be successfully authenticated and redirected to the **Tourist Landing Page**.
- Finally, host your completed project on GitHub and share both the repository link and live site link (via GitHub Pages).

Skills to be Evaluated and Mapping

Assignment Section	Core Skill	Sub-Skill	Expected Proficiency
Layout, Structure	HTML5	Semantic Tags	Intermediate
Content Organization	Problem Solving	Content Structuring	Beginner
Contact Form	HTML5 Forms & Validation	Basic Javascript Form Validation	Intermediate
UI Design & Styling	CSS3,Bootstrap	Flexbox / Grid Layout	Intermediate
Responsive Design	CSS3, Bootstrap,Tailwind Css	Media Queries / Grid	Intermediate
Bootstrap Components	Bootstrap	Cards, Form, Buttons	Beginner
Project Hosting & Version Control	Git & Github	Repo Management, Hosting	Beginner

Rubric & Mark Allocation (Total 25 Marks)

Skill/Component	Full Marks	Criteria for Full Marks	Partial Credit Description	Partial Credit Marks Range

Semantic HTML5 Input tags, Valid datatype	5	Correct use of all semantic tags; Valid input data and attributes	Minor misuse or omission of tags	2.5 - 3.5
CSS3 Style & Visual Design	4	Consistent styling; good use of box model, colors, spacing	Basic styling; lacks visual hierarchy	2 - 2.8
Responsive Design	4	Site performs well on desktop, tablet, and phone; correct media queries	Responsive with minor layout breaks	2 - 2.8
HTML5 Forms & JS Validation	3	All input fields validated correctly with appropriate constraints	Partial validation; missing error feedback	1.5 - 2
Bootstrap Components	3	Proper use of Bootstrap Forms modals, grid layout	Basic use of Bootstrap, limited components	1.5 - 2
Content Organization & Quality	3	Well-structured sections, proper use of logic function	Sections present but disorganized	1.5 - 2
GitHub Hosting & Version Control	3	Repository link shared, site live and accessible, meaningful commits	Repo/link present but incomplete documentation	1.5 - 2

Skill Taxonomy Structure

- Coding
 - HTML5
 - Semantic Tags
 - HTML Forms
 - Input Validation
 - CSS3
 - Box Model, Forms, Buttons
 - Media Queries
 - JavaScript
 - Form Validation, Function, Arrays
 - Git & Github
 - Repository Management
 - Hosting & Version Control

Required Folder Structure:

```
Signup-signinProject/  
├── SignUp.html  
├── SignIn.html  
├── travelapp.html (Module 1 Assignment Page)  
├── css/  
│   └── style.css  
├── js/  
│   └── index.js  
└── Images/  
    ├── logo.jpg  
    ├── samplepic1.jpg  
    └── samplepic2.jpg
```

Evaluation Guidelines

1. Review the student's live website and GitHub repository link.
2. For each assignment section, match student work to the corresponding skills listed in the taxonomy table.

3. Evaluate each skill independently using the rubric and assign marks according to the defined criteria (Full/Partial/No credit).
4. Take note of any ambiguous or borderline cases; document partial achievement with constructive feedback.
5. Provide holistic comments noting strengths and improvement areas for each skill.
6. Avoid subjective judgments based on aesthetics; focus on technical requirements and functional correctness.

Achievement Criteria & Passing Rules

- The student must obtain full marks in the Semantic HTML5 Layout and Responsive Design categories for passing.
- Partial achievement is allowed in up to 2 minor skill categories but not in core skills.
- A detailed scorecard with comments must accompany each evaluated assignment.
